# NORMALIZATION PROOFS

To check that our Relation is in BCNF,

1. **Identify Functional Dependencies:** Examine the functional dependencies within the table. These are dependencies between attributes, where the value of one attribute determines the value of another.
2. **Identify Candidate Keys:** Determine the candidate keys of the table. A candidate key is a minimal set of attributes that uniquely identifies each tuple in the table. All other attributes must be functionally dependent on the candidate keys.
3. **Provide Proof:** Once you've identified all functional dependencies and candidate keys, provide a formal proof for each non-trivial dependency, demonstrating that the determinant (X) is indeed a superkey.

1. 'PLAYER' relation:

- Attributes:

PLAYER {Player\_ID, Name, Role, Country, DOB}

- Functional dependencies:  
 $\text{Player\_ID} \rightarrow \text{Name}$   
 $\text{Player\_ID} \rightarrow \text{Role}$   
 $\text{Player\_ID} \rightarrow \text{Country}$   
 $\text{Player\_ID} \rightarrow \text{DOB}$
- Let  $X = \text{Player\_ID}$
- Now Let's take the closure of it,
- $X^+ = \{\text{Player\_ID}, \text{Name}, \text{Role}, \text{Country}, \text{DOB}\}$  ○ Thus, **Primary Key is Player\_ID.**
- Every non-key attribute must be fully determined by the whole primary key, not just a part of it. As we saw, each non-key attribute in this table solely relies on the Player\_ID for its value.
- Since in this Minimal Set of FDs, the left side in all of the FDs is **Player\_ID which is Candidate-key of this relation.**
- Therefore, **'PLAYER' is in BCNF.**

## 2. 'TEAM' Relation :

- Attributes:  
 $\text{TEAM} \{\text{Team\_Name}, \text{Year}, \text{Owner}, \text{Coach}, \text{Captain}\}$
- Functional dependencies:  
 $\{\text{Team\_Name}, \text{Year}\} \rightarrow \text{Owner}$   
 $\{\text{Team\_Name}, \text{Year}\} \rightarrow \text{Coach}$   
 $\{\text{Team\_Name}, \text{Year}\} \rightarrow \text{Captain}$
- Let  $X = \{\text{Team\_Name}, \text{Year}\}$
- Now Let's take the closure of it,
- $X^+ = \{\text{Team\_Name}, \text{Year}, \text{Owner}, \text{Coach}, \text{Captain}\}$
- Thus, **Primary Key=  $\{\text{Team\_Name}, \text{Year}\}$**
- The left side of all the FDs in minimal set of FDs for the relation 'TEAM' is

{Team\_Name, Year}, which is the primary key of this relation, so

○ **"TEAM" is in BCNF.**

### 3. "SPONSOR\_DETAILS" Relation :

- Attributes :

SPONSOR\_DETAILS {Company\_Name, Country, CEO}

- Functional dependencies: Company\_Name  $\rightarrow$  Country

Company\_Name  $\rightarrow$  CEO

○ Let X= {Company\_Name}

○ Now Let's take the closure of it,  $X^+ = \{Company\_Name, Country, CEO\}$

○ Thus, **Primary Key**= {Company\_Name}

○ The left side of all the FDs in minimal set of FDs for the relation "SPONSOR\_DETAILS" is {Company\_Name}, which is the primary key of this relation, so

○ **"SPONSOR\_DETAILS" is in BCNF.**

### 4. "STADIUM" Relation :

- Attributes :

STADIUM {Ground\_Name, City, Gold\_Seat, Silver\_Seat, Bronze\_Seat}

- Functional dependencies:

Ground\_Name  $\rightarrow$  City

Ground\_Name  $\rightarrow$  Gold\_Seat

Ground\_Name  $\rightarrow$  Silver\_Seat

Ground\_Name  $\rightarrow$  Bronze\_Seat

○ Let X= {Ground\_Name}

○ Now Let's take the closure of it,

- $X^+ = \{\text{Ground\_Name, City, Gold\_Seat, Silver\_Seat, Bronze\_Seat}\}$
- Thus, **Primary Key** = { Ground\_Name }
- The left side of all the FDs in minimal set of FDs for the relation 'STADIUM' is { Ground\_Name }, which is the primary key of this relation, so
- **"STADIUM" is in BCNF.**

#### 5. "USER"

- Attributes :  
USER {Email\_ID, User\_Name, Password, Position}
- Functional dependencies: Email\_ID  $\rightarrow$  User\_Name  
Email\_ID  $\rightarrow$  Password  
Email\_ID  $\rightarrow$  Position
- Let  $X = \{\text{Email\_ID}\}$
- Now Let's take the closure of it,  $X^+ = \{\text{Email\_ID, User\_Name, Password, Position}\}$
- Thus, **Primary Key** = { Email\_ID }
- The left side of all the FDs in minimal set of FDs for the relation 'USER' is { Email\_ID }, which is the primary key of this relation, so
- **"USER" is in BCNF.**

#### 6. "STAT" Relation :

- Attributes :  
STAT {Player\_ID, Year, Runs, Wickets, Catches, 4's, 6's, YO-YO\_Score, Sold\_Price, Strike\_Rate, Economy}
- Functional dependencies:  
{Player\_ID, Year}  $\rightarrow$  Runs  
{Player\_ID, Year}  $\rightarrow$  Wickets  
{Player\_ID, Year}  $\rightarrow$  Catches  
{Player\_ID, Year}  $\rightarrow$  4's  
{Player\_ID, Year}  $\rightarrow$  6's

$\{Player\_ID, Year\} \rightarrow YO\_YO\_Score$

$\{Player\_ID, Year\} \rightarrow Sold\_Price$

$\{Player\_ID, Year\} \rightarrow Strike\_Rate$

$\{Player\_ID, Year\} \rightarrow Economy$

- Let  $X = \{Player\_ID, Year\}$

- Now Let's take the closure of it,

- $X^+ = \{Player\_ID, Year, Runs, Wickets, Catches, 4's, 6's, YO\_YO\_Score, Sold\_Price, Strike\_Rate, Economy\}$

- Thus, **Primary Key** =  $\{Player\_ID, Year\}$

- The left side of all the FDs in minimal set of FDs for the relation 'STAT' is  $\{Player\_ID, Year\}$ , which is the primary key of this relation, so

- "STAT" is in BCNF.

## 7. " PAST\_MATCH" Relation :

- Attributes :

PAST\_MATCH {Timestamp, Team\_Name, Opponent\_Team, Year, Ground\_Name, Toss, Score1, Score2, Winner, Man\_of\_the\_Match }

- Functional dependencies:

Timestamp  $\rightarrow$  Team\_Name

Timestamp  $\rightarrow$  Opponent\_Team

Timestamp  $\rightarrow$  Year

Timestamp  $\rightarrow$  Ground\_Name

Timestamp  $\rightarrow$  Toss

Timestamp  $\rightarrow$  Score1 Timestamp

$\rightarrow$  Score2

Timestamp  $\rightarrow$  Winner

Timestamp  $\rightarrow$  Man\_of\_the\_Match

- Let  $X = \{\text{Timestamp}\}$
- Now Let's take the closure of it,
- $X^+ = \{\text{Timestamp, Team\_Name, Opponent\_Team, Year, Ground\_Name, Toss, Score1, Score2, Winner, Man\_of\_the\_Match}\}$
- Thus, **Primary Key** =  $\{\text{Timestamp}\}$
- The left side of all the FDs in minimal set of FDs for the relation 'PAST\_MATCH' is  $\{\text{Timestamp}\}$ , which is the primary key of this relation, so
- "PAST\_MATCH" is in **BCNF**.

#### 8. "PLAYER\_SCOREBOARD" Relation :

- Attributes :  
PLAYER\_SCOREBOARD {Player\_ID, Timestamp, Runs, Wickets, Catches, 4's, 6's, Strike\_Rate, Economy}
- Functional dependencies:  
 $\{\text{Player\_ID, Timestamp}\} \rightarrow \text{Runs}$   
 $\{\text{Player\_ID, Timestamp}\} \rightarrow \text{Wickets}$   
 $\{\text{Player\_ID, Timestamp}\} \rightarrow \text{Catches}$   
 $\{\text{Player\_ID, Timestamp}\} \rightarrow 4's$   
 $\{\text{Player\_ID, Timestamp}\} \rightarrow 6's$

$\{\text{Player\_ID}, \text{Timestamp}\} \rightarrow \text{Strike\_Rate}$

$\{\text{Player\_ID}, \text{Timestamp}\} \rightarrow \text{Economy}$

- Let  $X = \{\text{Player\_ID}, \text{Timestamp}\}$
- Now Let's take the closure of it,
- $X^+ = \{\text{Player\_ID}, \text{Timestamp}, \text{Runs}, \text{Wickets}, \text{Catches}, 4\text{'s}, 6\text{'s}, \text{Strike\_Rate}, \text{Economy}\}$
- Thus, **Primary Key** =  $\{\text{Player\_ID}, \text{Timestamp}\}$
- The left side of all the FDs in minimal set of FDs for the relation 'PLAYER\_SCOREBOARD' is  $\{\text{Player\_ID}, \text{Timestamp}\}$ , which is the primary key of this relation, so
- "PLAYER\_SCOREBOARD" is in BCNF.

9. "IPL\_SEASON" Relation :

- Attributes :

IPL\_SEASON {Year, Winner, Runner\_UP, Player\_OF\_The\_Season, Orange\_Cap, Purple\_Cap}

- Functional dependencies:

$\text{Year} \rightarrow \text{Winner}$

$\text{Year} \rightarrow \text{Runner\_UP}$

$\text{Year} \rightarrow \text{Player\_OF\_The\_Season}$

$\text{Year} \rightarrow \text{Orange\_Cap}$

$\text{Year} \rightarrow \text{Purple\_Cap}$

- Let  $X = \{\text{Year}\}$
- Now Let's take the closure of it,
- $X^+ = \{\text{Year}, \text{Winner}, \text{Runner\_UP}, \text{Player\_OF\_The\_Season}, \text{Orange\_Cap}, \text{Purple\_Cap}\}$
- Thus, **Primary Key** =  $\{\text{Year}\}$
- The left side of all the FDs in minimal set of FDs for the relation 'IPL\_SEASON' is  $\{\text{Year}\}$ , which is the primary key of this relation, so

- “IPL\_SEASON” is in BCNF.

10. ” SEASON\_SPONSOR” Relation :

- Attributes :

SEASON\_SPONSOR {Year, Company\_Name, Sponsor\_Type, Amount}

- Functional dependencies:

{Year, Company\_Name, Sponsor\_Type}  $\rightarrow$  Amount

- Let  $X = \{Year, Company\_Name, Sponsor\_Type\}$

- Now Let's take the closure of it,

- $X^+ = \{Year, Company\_Name, Sponsor\_Type, Amount\}$

- Thus, **Primary Key** = {Year, Company\_Name, Sponsor\_Type }

- The left side of all the FDs in minimal set of FDs for the relation 'SEASON\_SPONSOR' is {Year, Company\_Name, Sponsor\_Type } which is the primary key of this relation, so

- “SEASON\_SPONSOR” is in BCNF.

11. ” TEAM\_SPONSOR” Relation :

- Attributes :

TEAM\_SPONSOR {Company\_Name, Team\_Name, Year, Amount}

- Functional dependencies:

{ Company\_Name, Team\_Name, Year }  $\rightarrow$  Amount

- Let  $X = \{ \text{Company\_Name}, \text{Team\_Name}, \text{Year} \}$
- Now Let's take the closure of it,
- $X^+ = \{ \text{Company\_Name}, \text{Team\_Name}, \text{Year}, \text{Amount} \}$
- Thus, **Primary Key** =  $\{ \text{Company\_Name}, \text{Team\_Name}, \text{Year} \}$
- The left side of all the FDs in minimal set of FDs for the relation 'TEAM\_SPONSOR' is  $\{ \text{Company\_Name}, \text{Team\_Name}, \text{Year} \}$ , which is the primary key of this relation, so
- "TEAM\_SPONSOR" is in **BCNF**.

## 12. "UPCOMING\_MATCH" Relation :

- Attributes :  
UPCOMING\_MATCH {Timestamp, Team\_Name, Opponent\_Team, Year, Gold\_Price, Silver\_Price, Bronze\_Price, Ground\_Name}
- Functional dependencies:
  - Timestamp  $\rightarrow$  Team\_Name
  - Timestamp  $\rightarrow$  Opponent\_Team
  - Timestamp  $\rightarrow$  Year
  - Timestamp  $\rightarrow$  Gold\_Price
  - Timestamp  $\rightarrow$  Silver\_Price
  - Timestamp  $\rightarrow$  Bronze\_Price
  - Timestamp  $\rightarrow$  Ground\_Name
- Let  $X = \{ \text{Timestamp} \}$
- Now Let's take the closure of it,

- $X^+ = \{\text{Timestamp, Team\_Name, Opponent\_Team, Year, Gold\_Price, Silver\_Price, Bronze\_Price, Ground\_Name}\}$
- Thus, **Primary Key** = { Timestamp }
- The left side of all the FDs in minimal set of FDs for the relation 'UPCOMING\_MATCH' is {Timestamp}, which is the primary key of this relation, so
- "UPCOMING\_MATCH" is in BCNF.

### 13. " AUDIENCE" Relation :

- Attributes :  
AUDIENCE {Booking\_ID, Gold\_Seat, Silver\_Seat, Bronze\_Seat, Email\_ID}
- Functional dependencies:  
 $\text{Booking\_ID} \rightarrow \text{Gold\_Seat}$   
 $\text{Booking\_ID} \rightarrow \text{Silver\_Seat}$   
 $\text{Booking\_ID} \rightarrow \text{Bronze\_Seat}$   
 $\text{Booking\_ID} \rightarrow \text{Email\_ID}$

- Let  $X = \{\text{Booking\_ID}\}$
- Now Let's take the closure of it,
- $X^+ = \{\text{Booking\_ID}, \text{Gold\_Seat}, \text{Silver\_Seat}, \text{Bronze\_Seat}, \text{Email\_ID}\}$
- Thus, **Primary Key** =  $\{\text{Booking\_ID}\}$
- The left side of all the FDs in minimal set of FDs for the relation 'AUDIENCE' is
- $\{\text{Booking\_ID}\}$ , which is the primary key of this relation, so
- "AUDIENCE" is in BCNF.**

#### 14."TEAM'S PLAYER" RELATION

- Since, All attributes of this relation are primary key, By definition of BCNF, This is in BCNF.

At first, this table was not in BCNF because there was attribute named Sold\_Price.

- Attributes :

TEAM'S\_PLAYER {Player\_ID, Team\_Name, Year, Sold\_Price}

- Functional dependencies:

$\{Player\_ID, Team\_Name, Year\} \rightarrow Sold\_Price$

$\{Player\_ID, Year\} \rightarrow Sold\_Price$

- Let  $X = \{Player\_ID, Team\_Name, Year\}$
- Now Let's take the closure of it,
- $X^+ = \{Player\_ID, Team\_Name, Year, Sold\_Price\}$
- Thus, **Primary Key** = { Player\_ID, Team\_Name, Year }

Sold\_Price is not FULLY FUNCTIONALLY DEPENDENT on Candidate key, so it violet 2NF condition thus, we **decomposed** this table into

R1 { Player\_ID, Team\_Name, Year}

R2 { Player\_ID, Year, Sold\_Price}

Now, Player\_ID and Year was already present in STAT table so we include Sold\_Price in that table to **reduce data redundancy**.

## 15. "TICKET\_BOOKING" RELATION

- Since, All attributes of this relation are primary key, By definition of BCNF, This is in BCNF.
